

Lab Name:	Installing Nomad on macOS
Section Number:	3
Lecture Number:	9

Installing Nomad using Homebrew Package Manager

1. Download and install Homebrew – <https://brew.sh>
2. Install the HashiCorp tap

```
$ brew tap hashicorp/tap
```

3. Install the latest release of Nomad

```
$ brew install hashicorp/tap/nomad
```

4. Validate Nomad install by viewing the Nomad version

```
$ nomad version
```

Installing Nomad Manually

- Download the Nomad binary – <https://releases.hashicorp.com/nomad>
- Unzip the `nomad.zip` file that was downloaded
- Validate the **\$PATH**

```
$ echo $PATH
```

- Move binary to desired directory in \$PATH, such as `/usr/local/bin`
- Validate Nomad install by viewing the Nomad version

```
$ nomad version
```
